The patented* Protector XStream Laboratory Hood was engineered to be the best containing fume hood. Testing shows the Protector XStream easily meets containment per SEFA-1† low velocity hood standards when subjected to the ASHRAE 110† test protocol with results of less than 0.05 ppm leak rate when tested at 4.0 lpm at OSHA-recognized 60 fpm face velocity.

During independent testing**, the Protector XStream Hood was challenged well beyond the SEFA-1† standards. With a face velocity of 40 fpm and sash fully open, the Protector XStream was subjected to 50 fpm cross drafts, NIH† protocol, and tracer gas measurements in the chest of the mannequin. In all scenarios, the Protector XStream allowed 0.00 ppm average level of tracer gas outside the fume hood. Although your safety officer or industrial hygienist will determine the actual face velocity setting for your laboratory, the ability of the Protector Hood to contain under these adverse conditions sets a new standard of safety.

Safety is foremost, but energy savings is equally impressive. Although face velocity is a factor, it’s the volumetric rate (CFM) that determines the energy consumption of a fume hood. Operating a 6’ Protector XStream Hood at 60 fpm face velocity, with the sash in its fully open position, requires only 690 CFM. Regardless of your desired operating face velocity, the Protector XStream yields the lowest required CFM.

Energy savings translates to dollar savings. The Protector XStream Hood provides an excellent economic payback when compared to traditional by-pass hoods operated at 80 or 100 fpm. For example, a 6’ Protector XStream Hood with sash fully open when operated at 60 fpm face velocity consumes a mere 690 CFM as previously mentioned. Compared to a traditional by-pass hood operated at 100 fpm (1250 CFM), the Protector XStream Hood offers significant savings, which adds up to annual dollar savings per year of $3920.††

For even greater savings, the Protector XStream may be factory-prepared to accommodate a variable air volume system without the need for by-pass modifications.

Using the concepts of fluid dynamics, Labconco engineers designed the Protector XStream Laboratory Hood to produce horizontal airflow, which reduces the tendencies for turbulence. The innovative and aerodynamic designs of the sash handle, air foil, upper dilution air supply and rear downflow baffle work in concert to produce horizontal airflow patterns that significantly reduce concentrations of chemical contaminants throughout the work area, particularly near the operator’s breathing zone and at the work surface. Depending on sash position, tendencies for air turbulence, vortexing and “the roll” frequently observed during traditional fume hood smoke tests are virtually eliminated.

Traditional By-Pass Hood Design

Smoke tests on traditional hoods show the tendency for contaminants generated in the interior to roll forward producing high concentrations of contaminants behind the sash in close proximity to the user’s breathing zone.

Protector XStream Hood Design

In contrast, smoke tests on Protector XStream Hoods show contaminants removed in a single pass and a remarkable lack of turbulence. Horizontal laminar airflow toward the baffle forces contaminants to the rear interior, away from the user. The upper dilution air supply sweeps the upper interior to eliminate stagnant pockets of air and to prevent contaminants from concentrating behind the sash.

*U.S. Patent No. 6,461,233 **Independent testing by AccuTec Services, Inc., Lee’s Summit, MO, National Environmental Balancing Bureau (NEBB)-Certified, Professional Engineer †See back cover for a list of regulations, standards and registered trademarks. ††See page 5 for energy savings details.
Upper Dilution Air Supply
The sash interior is constantly bathed with room air from the dilution supply above the work area to eliminate chemical fumes along the sash plane, near the critical breathing zone. A small percentage (5-10%) of the required air volume is introduced through the dilution air supply to ensure maximum containment. No additional blowers are required.

Rear Downflow Dual Baffle System
The slots in the primary baffle direct inflow air in non-turbulent streams from the hood face into the baffle in a single pass. The secondary baffle, located between the primary baffle and the back wall, counteracts the upward air streams that create roll in traditional hoods by forcing the air movement downward before exhausting. No moving components are used.

Clean-Sweep™ Sash Handle
The sash handle includes Clean-Sweep slots to bleed air into the hood chamber and direct chemical fume concentrations away from the user’s breathing zone. The slim-line radiused sash handle sweeps airflow into the hood with minimal turbulence.

Opti-Zone™ Baffle
The Opti-Zone Baffle decreases the typical face velocity variations found with other baffles. The unique slot pattern and sizes increase velocities in the middle and at the work surface of the hood where it is needed while slowing velocities at the corners. This uniformity lowers the required average face velocity necessary for containment. Tapered slots decrease resistance to air entering the baffle.

Eco-Foil™ Air Foil
The Eco-Foil reduces energy consumption by 7-10% compared to flat air foils while its aerodynamic curve allows air to sweep the work surface for maximum containment. Clean-Sweep openings pull inflow air from under the air foil forcing air into non-turbulent air streams. The curve is comfortable for arms resting on it while encouraging users to keep fume-generating items well within the hood’s interior.
Protector® XStream® Laboratory Hoods

• 37.5" (95.3 cm) high sightline from the work surface to the header panel.
• Removable front and side panels, and front and interior service access panels for access to plumbing and electrical wiring.
• Pre-wired T8 fluorescent lighting with vapor-proof design and ADA-compliant light and blower switches.
• Sash stop located at 18" (45.7 cm) sash opening position.
• Powder-coated stainless steel, 12.81" (32.5 cm) ID exhaust connection(s).

All models conform to the following regulations and standards:**
• CFR 29, Part 1910
• SEFA 1-2010
• NFPA 45-2011
• ASTM E84-09C
• ASHRAE 110-1995
• ANSI Z9.5-2011
• UL 61010-1
• CAN/CSA C22.2 No. 61010-1
• UL 1805
• CE Conformity Marking (230 volt models)
• SEFA 8-2010, Cabinet Surface Finish Tests

Fixtured models feature:
• Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided.
• One pre-wired GFCI electrical duplex receptacle on lower right side and, on 8’ models only, one additional pre-wired GFCI electrical duplex receptacle on the lower left side.

Required accessories not included:
• Remote Blower.
• Ductwork.
• Work Surface. See page 15.
• Base Cabinet or Stand.

Optional accessories for on-site installation include:
• Service Fixture Kits.
• Electrical Duplex Kits.
• Guardian Airflow Monitor Kits.
• Ceiling Enclosure and Rear Finish Panel Kits.
• Distillation Grid Kits.
• Sash Stop Kits.

Contact Labconco for ordering information on accessories.
Ordering Information, Airflow Data & Energy Savings

Protector XStream Laboratory Hoods

Use this key to configure the **nine digit catalog number** to order your Protector XStream Laboratory Hood. For example, a **110410002** is a 4’ Protector XStream Laboratory Hood, with 100-115 volt, 50/60 Hz electrical requirements, two service fixtures and one GFCI electrical duplex receptacle.

**STEP 1.** Select the **width** of your fume hood. This number is the fourth digit of your catalog number. Shipping weight is also noted. Add 10 lbs. (5 kg) for Fixtured Models.

- 4 = 4’ (122 cm)
- 6 = 6’ (183 cm)
- 5 = 5’ (152 cm)
- 8 = 8’ (244 cm)

- 440 lbs. (200 kg)
- 600 lbs. (272 kg)
- 770 lbs. (349 kg)

**STEP 2.** Select the **Electrical Requirements, Service Fixtures and GFCI Electrical Duplex Receptacle** combination you desire. These two numbers comprise the eighth and ninth digits of your catalog number.

The Protector XStream Laboratory Hood shows significant savings over its lifetime when compared to a typical fume hood. The CFM usage and related energy costs associated with exhausting tempered air from the laboratory to the outside are provided below. Maximum savings are achieved using a Protector XStream Laboratory Hood operating at 60 fpm with a variable air volume system. Protector XStream Laboratory Hoods are compatible for use with variable air volume (VAV) systems. Please Contact Labconco for ordering information on factory preparing Protector XStream Laboratory Hoods to a specific VAV controller cutout.

Protector® Premier® Laboratory Hoods

Protector® Premier® Laboratory Hoods incorporate a sleek interior with a molded one-piece fiberglass liner, the signature feature of Labconco’s leading line of fume hoods since 1961. The one-piece liner of specially-formulated, fiberglass-reinforced polyester offers corrosion and fire resistance and easy clean up. Without seams, the interior has fewer points of deterioration for longer life.

Like the Protector XStream Hoods, Protector Premier Hoods incorporate many containment-enhancing features including Clean-Sweep™ technology and the Eco-Foil™ air foil. Testing confirms the Protector Premier Hood meets the SEFA-1* standard of a low velocity, high performance hood and may be operated as low as 60 fpm. These hoods are offered for use with a remotely-located blower or with a built-in blower — the only high performance hood with built-in blower available anywhere.

Features and benefits unique to Protector® Premier® Laboratory Hoods are described below. Additional features are detailed on page 8-11.

One-piece molded fiberglass liner offers superior corrosion and chemical resistance, durability and light reflectivity. Its seamless and smooth, radiused corners make cleaning easy and results in less deterioration for longer life. On models for use with remote blowers, as shown above, the exhaust connections are also seamless, molded fiberglass.

Models with built-in blower are available. Built-in blower is belt-driven with molded thermoplastic housing and coated aluminum impeller that is non-sparking and corrosion-resistant. The blower is available with standard or explosion-proof motor.

*See back cover for a list of regulations, standards and registered trademarks.
Protector® Premier® Laboratory Hoods
for use with remote blower

Fixtured models feature:
• Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided.
• One pre-wired GFCI electrical duplex receptacle on lower right side and, on 8’ and larger models only one additional pre-wired GFCI electrical duplex receptacle on the lower left side.

Required accessories not included:
• Remote Blower.
• Ductwork.
• Work Surface. See page 15.
• Base Cabinet or Stand.

Optional accessories for on-site installation include:
• Service Fixture Kits.
• Electrical Duplex Kits.
• Guardian Airflow Monitor Kits.
• Distillation Grid Kits.
• Sash Stop Kits.
• Ceiling Enclosure and Rear Finish Panel Kits.

All models feature:
• By-pass airflow design.
• Eco-Foil® Air Foil with aerodynamic Clean-Sweep® airflow openings.*
• Cord-Keeper™ Slots on left and right side of air foil.
• Glacier white powder-coated steel exterior.
• One-piece molded fiberglass liner and pre-set baffle(s) with flame spread less than 25 per ASTM E-84.**
• Tempered safety glass vertical-rising sash with powder-coated sash handle.
• 37.5” (95.3 cm) high sightline from the work surface to header panel.
• Removable front and side panels, and front service access panels for access to plumbing and electrical wiring.
• Pre-wired T8 fluorescent lighting with vapor-proof design and ADA-compliant light and blower switches.
• Molded fiberglass 12.81” ID exhaust connection(s).

All models conform to the following regulations and standards**:

Protector® Premier Laboratory Hoods
WITH BUILT-IN BLOWER

All models conform to the following regulations and standards**:

- CFR 29, Part 1910
- NFPA 45-2011
- ASHRAE 110-1995
- UL 61010-1
- UL 1805
- SEFA 1-2010, Cabinet Surface Finish Tests
- SEFA 8-2010
- CE Conformity Marking (230 volt models)
- SEFA 8-2010, Cabinet Surface Finish Tests

Standard models feature:

- Pre-wired T8 fluorescent lighting with vapor-proof design, and ADA-compliant light and blower switches.

Explosion-proof models feature:

- Explosion-proof blower and incandescent light fixture (bulb not included).
- Furnished without switches, electrical receptacles and wiring.

Fixture models feature:

- Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided.
- One pre-wired GFCI electrical duplex receptacle on lower right side.

Required Accessories not included:

- Ductwork.
- Work Surface. See page 15.
- Base Cabinet or Stand.

Optional accessories for on-site installation include:

- Service Fixture Kits.
- Electrical Duplex Kits.
- Guardian Airflow Monitor Kits.
- Distillation Grid Kits.
- Sash Stop Kits.
- Ceiling Enclosure and Rear Finish Panel Kits.

Protector XL Benchtop Laboratory Hoods have chemical-resistant panel liners that offer superior design flexibility. They are supplied in widths from 3 to 16 feet and three depths to meet a variety of installation and application requirements.

Like the Protector XStream Hoods, Protector XL Benchtop Hoods incorporate many containment-enhancing features including Clean-Sweep™ technology and Eco-Foil™ air foil. Testing confirms the Protector XL Hood meets the SEFA-1* standard of a low velocity, high performance hood and may be operated as low as 60 fpm.

The Opti-Zone™ Baffle’s unique slot pattern and sizes increase velocities in the middle and at the work surface of the hood where it is needed while slowing velocities at the corners. The overall effect is to lower the required average face velocity necessary for containment. Tapered slots decrease resistance to air entering the baffle.

*See back cover for a list of regulations, standards and registered trademarks.
Protector® XL® Laboratory Hoods

All models feature:

• By-pass airflow design.
• Eco-Foil Airfoil with aerodynamic Clean-Sweep™ airflow openings.*
• Cord-Keeper™ Slots on left and right side of airfoil.
• Glacier white powder-coated steel exterior.
• Chemical-resistant, fiberglass-reinforced, composite panel liner and baffle.
• Opti-Zone™ Baffle* with flame spread index less than 25 per ASTM E84**. Baffle is removable for cleaning.
• Tempered safety glass vertical-rising sash with powder-coated sash handle.
• 37.5” (95.3 cm) high sightline from the work surface and header panel.
• Removable front and side panels, and front and interior service access panels for access to plumbing and electrical wiring.
• Pre-wired T8 fluorescent lighting with vapor-proof design and ADA-compliant light and blower switches.
• Powder-coated stainless steel, 12.81” (32.5 cm) ID exhaust connection(s).

All models conform to the following regulations and standards**:

• CFR 29, Part 1910  •  SEFA 1-2010
• NFPA 45-2011  •  ASTM E84-09C
• ASHRAE 110-1995  •  ANSI Z9.5-2011

Fixtured models feature:

• Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided.
• One pre-wired GFCI electrical duplex receptacle on lower right side and, on 8’ and larger models only, one additional pre-wired GFCI electrical duplex receptacle on the lower left side.

Required accessories not included:

• Remote Blower.
• Work Surface. See page 15.
• Base Cabinet or Stand.

8’ Protector XL Laboratory Hood 111800002 is shown with SpillStopper Work Surface 9500800, Protector Standard Storage Cabinet 9900000 and Protector Solvent Storage Cabinet 9902000.
Ordering Information & Dimensional Data

Protector XL™ Laboratory Hoods

Use this key to configure the nine digit catalog number to order your Protector XL Laboratory Hood. For example, a 111800002 is an 8’ Protector XL Laboratory Hood, with 31.7” depth, 100-115 volt, 50/60 Hz electrical requirements, two service fixtures and two GFCI electrical duplex receptacles.

STEP 1. Select the width of your fume hood. This number is the fourth digit of your catalog number. Shipping weight is also noted for 31.7” deep models. Add 10 lbs. (5 kg) for Fixtured Models.

<table>
<thead>
<tr>
<th>Width (ft)</th>
<th>Shipping Weight (lbs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>350 lbs. (159 kg)</td>
</tr>
<tr>
<td>4</td>
<td>375 lbs. (170 kg)</td>
</tr>
<tr>
<td>5</td>
<td>450 lbs. (204 kg)</td>
</tr>
<tr>
<td>6</td>
<td>525 lbs. (238 kg)</td>
</tr>
</tbody>
</table>

STEP 2. Select the exterior depth of your fume hood. This number is the fifth digit of your catalog number. To the shipping weight noted above, add 40 lbs. (18 kg) for 37.7” deep models and 85 lbs. (39 kg) for 43.7” deep models.

<table>
<thead>
<tr>
<th>Depth (in)</th>
<th>Shipping Weight (lbs)</th>

</thead>
<tbody>
<tr>
<td>0</td>
<td>31.7” (81 cm)</td>
</tr>
<tr>
<td>1</td>
<td>37.7” (96 cm)</td>
</tr>
</tbody>
</table>

STEP 3. Select the Electrical Requirements, Service Fixtures and GFCI Electrical Duplex Receptacle combination you desire. These two numbers comprise the eighth and ninth digits of your catalog number.

<table>
<thead>
<tr>
<th>Electrical Requirements</th>
<th>No Service Fixtures</th>
<th>Two Service Fixtures</th>
<th>Two Service Fixtures &amp; GFCI Duplex*</th>
</tr>
</thead>
<tbody>
<tr>
<td>100-115 volts, 50/60 Hz, 10 amps</td>
<td>00</td>
<td>20</td>
<td>02</td>
</tr>
<tr>
<td>208-230 volts, 50/60 Hz, 5 amps</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Contact Labconco for ordering information on Protector XL Laboratory Hoods wider than 8’.

*Hoods with GFCI electrical duplex are rated at 20 amps. 8’ hoods have two GFCI electrical duplex receptacles, one mounted on each side, 20 amps each.

Contact Labconco at 800-821-5525 or 816-333-8811 or visit www.labconco.com for BIM Revit® and detailed AutoCAD® drawings. See back cover for trademark information.
Ordering Information & Dimensional Data
SpillStopper™ Work Surfaces

Use this key to configure the seven digit catalog number to order your SpillStopper Dished Solid Epoxy Work Surface. For example, a 9503610 is a 6’ SpillStopper Work Surface, with a left rear cupsink cutout for use with a Protector XStream Hood.

9 5 0

STEP 1. Select the model and exterior depth of your fume hood. This number is the fourth digit of your catalog number.

<table>
<thead>
<tr>
<th>Model &amp; Depth</th>
<th>Hood Model/Depth</th>
<th>Work Surface Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 Premier, XL with 31.7” depth</td>
<td>30.0” (76.2 cm)</td>
<td>A 43.7” (111.6 cm)</td>
</tr>
<tr>
<td>1 XL with 37.7” depth</td>
<td>36.0” (91.4 cm)</td>
<td>50.0” (127.0 cm)</td>
</tr>
<tr>
<td>2 XL with 43.7” depth</td>
<td>43.7” (111.6 cm)</td>
<td>56.0” (142.2 cm)</td>
</tr>
<tr>
<td>3 XStream, 37.7” depth</td>
<td>37.7” (95.3 cm)</td>
<td>48.0” (121.9 cm)</td>
</tr>
</tbody>
</table>

STEP 2. Select the nominal width of your fume hood. This number is the fifth digit of your catalog number.

<table>
<thead>
<tr>
<th>Nominal Width</th>
<th>3’</th>
<th>4’</th>
<th>5’</th>
<th>6’</th>
<th>7’</th>

<td>37.7”</td>
<td>43.7”</td>
<td>31.7”</td>
<td>37.7”</td>
<td>43.7”</td>
</tr>
</tbody>
</table>

STEP 3. Select a left cupsink cutout option (cupsink is sold separately). See dimensional drawing. This number is the sixth digit of your catalog number.

<table>
<thead>
<tr>
<th>Left Cupsink Cutout</th>
<th>0 None</th>
<th>1 Rear</th>
<th>2 Side**</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right Cupsink Cutout</td>
<td>0 None</td>
<td>1 Rear</td>
<td>2 Side**</td>
</tr>
</tbody>
</table>

*Protector XL Laboratory Hoods only. **Not compatible with Protector Solvent Storage Cabinets.

4005200 Oval Polypropylene Cupsink
Mounts in work surface with cupsink cutout, 3.0” x 6.0” (7.6 x 15.2 cm). 1.5” National Pipe Straight Mechanical (NPSM) thread. Shipping weight 4 lbs. (2 kg)
Standards & Registered Trademarks

Standards

Key aspects of standards and codes as they relate to laboratory ventilation are summarized below.

Evaluates fume hood’s containment characteristics.

- Three part test: Smoke generation, face velocity profile, tracer gas release @ 4 liters per minute.
- Rated As Manufactured (AM), As Installed (AI) and As Used (AU).

American Society of Heating, Refrigerating and Air-Conditioning Engineers

1791 Tullie Circle NE
Atlanta, GA 30329
(404) 849-8888
www.ashrae.org

ANSI Z9.5-2011 Standard—
Laboratory Ventilation
Covers entire laboratory ventilation system.

- Vertical stack discharge @ 2000-3000 fpm.
- New and remodeled hoods shall have a monitoring device.
- Ductless hoods should only be used with non-hazardous materials.

American Industrial Hygiene Association

2700 Prosperity Avenue, Suite 250
Fairfax, VA 22031
(703) 849-8888
www.aiha.org

Federal Register 29 CFR Part 1910
Occupational exposure to hazardous chemicals in laboratories

National Research Council Recommendations Concerning Chemical Hygiene in Laboratories (Non-mandatory) from “Prudent Practices.”

- Fume hoods should have a continuous monitoring device.
- Face velocities should be between 60-100 linear feet per minute (fpm).
- Average 2.5 linear feet of hood space per person.

Occupational Safety & Health Administration U.S. Department of Labor

200 Constitution Avenue, NW
Washington, DC 20210
(800) 321-6742
www.osha.gov

ASTM E84-09C Standard Test Method for Surface Burning Characteristics of Building Materials
Determines the relative burning behavior of the material by observing the flame spread along the specimen.

- Measures the flame spread and smoke development.
- Material is exposed to flaming fire for 10 minutes and the results measured and recorded.
- Results are compared to the indexes of mineral fiber cement board (flame spread and smoke development of zero) and red oak flooring (smoke development of 100).

ASTM International

100 Barr Harbor Drive
P.O. Box C700
West Conshohocken, PA 19428-2959
(610) 832-9585
www.astm.org

- Laboratory hoods should not be relied on for explosion protection.
- Fume hood exhaust air should not be recirculated.
- Services should be external to the hood.
- Materials of construction should have flame spread of 25 or less.

National Fire Protection Association

1 Batterymarch Park
Quincy, MA 02169-7471
(800) 344-3555 or (617) 770-3000
www.nfpa.org

NIH - Section 15991 Onsite Testing for Constant Volume Hoods - June 2006

- Follows ASHRAE test methods except for the following:
  1. 6 L tracer gas release rate instead of 4 L.
  2. Hood is loaded with boxes and cans.
  3. Rapid walk-by test.

National Institutes of Health

9000 Rockville Pike
Bethesda, MD 20892
(301) 496-4000
www.nih.gov

SEFA 1-2010 Laboratory Fume Hoods Recommended Practices
High performance fume hood definition: hood with sash fully open and operating at 60 fpm contains at 4.0 AM 0.05.

- Covers design, installation, testing, maintenance and safe use of laboratory fume hoods

SEFA 8-2010 Recommended Practices For Metal Laboratory Grade Furniture, Casework, Shelving and Tables, 8.0 Cabinet Surface Finish Tests

defines test methods for evaluating the finish of laboratory furniture.

- Laboratory grade paint finishes shall withstand chemical exposure, hot water, and impact from a one-pound ball dropped from 12’.
- Paint coating shall sufficiently adhere to the substrate.
- Paint shall be resistant to scratches.

Scientific Equipment & Furniture Association

1205 Franklin Avenue, Suite 320
Garden City, NY 11530
(516) 294-5424
www.sefalabs.com

UL 61010-1 Electrical Equipment for Measurement, Control and Laboratory Use

- Specifies general safety requirements for electrical equipment.
- Design and methods of construction should provide adequate protection to the operator and the surrounding area against shock or burn, mechanical hazards, excessive temperature, spread of fire from the equipment, gas liberation, explosion or implosion.

Canadian Standards Association

5060 Spectrum Way, Suite 100
Mississauga, Ontario
LAW 56, CANADA
(800) 463-6727 or (416) 747-4044
www.cs.ca

ETL listing

ETL Testing Laboratories is a Nationally Recognized Testing Laboratory (NRTL). The ETL mark signifies that the product conforms to the following:

- UL Standard 61010-1 in the U.S.
- CAN/CSA Standard C22.2 No. 61010.1 in Canada.
- Products that bear the ETL mark are subjected to a comprehensive safety program that includes testing, listing, labeling and quarterly follow-up inspections.

Intertek Group

www.intertek.com

CE Marking

Indicates an electrical apparatus conformity to all safety and other directives/specifications presently required by the Council of European Communities.

- Electrical safety
- Electromagnetic emissions testing — interference signals being output by the product.
- Electromagnetic immunity testing — the product does not respond to outside electromagnetic interference signals.

European Union
